

COVID-19 VACCINE FACTS

VACCINES (SHOTS) ARE ONE TOOL TO FIGHT THE COVID-19 PANDEMIC.

HOW THE VACCINES WORK

- Vaccines work with your body's natural defenses to get ready to fight the virus.

VACCINE SAFETY

- The vaccines have gone through the same safety tests as all vaccines.
- You can't get COVID-19 from the vaccine.

TYPES OF VACCINES

- Different types of COVID-19 vaccines will be available.
- Most of these vaccines are given in two shots, one at a time and spaced apart.
- If you are told you need two shots, make sure that you get both of them.

SIDE EFFECTS

- You may feel side effects like sore muscles, feeling tired, or mild fever.
- This means the vaccine is working to help teach your body how to fight the virus.
- Having these types of side effects does NOT mean that you have COVID-19.

AFTER GETTING THE VACCINE

- Keep wearing a mask.
- Wash your hands often.
- Stay at least 6 feet away from other people.

LEARN MORE

It's important to not rely on social media for information about the vaccines.
