

Tailored Care for Caregivers  
Screening tool:

TCare is a well -documented informal/family caregiver assessment tool that provides the caregiver with a better understanding of challenges faced and targets specific resources based on the caregiver's response to assessment questions. The platform is currently implemented in over 250+ organizations in 22 states and is impacting the lives of over 100,000 family caregivers.

The T-Care Screen found on this site, takes about 20 minutes to complete and then the full assessment takes about 40 minutes. After the assessment is completed the program gives almost immediate results and offers guidance for assessment staff and caregiver to put together a care plan together.
